DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 13-18, 5-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Park et al in view of Terrill et al.

Regarding claim 13, Park et al discloses on figure 4 a method for resisting total dose ionizing radiation effects in a bulk CMOS or NMOS device, the device having a Si substrate 2, two or more FET's on the substrate, and a field oxide region 4 separating each FET, the device configured so application of a steady negative back bias to the substrate results in a threshold voltage between about 0 V and 0.8 V, the method comprising placing the device in a radiation environment. Park et al does not disclose applying the steady negative back bias relative to a source voltage to a MOS region of the substrate. However, Terrill et al discloses applying the steady negative back bias relative to a source voltage to a MOS region of the substrate (col. 4, lines 20-30). In view of such teaching, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify Park et al by having applying the steady negative back bias relative to a source voltage to a MOS region of the substrate for the

purpose of obtaining excellent turn off sub threshold and Tran conductance characteristic as taught by Terrill et al (col.1, lines 65-66).

Regarding claims 14-18, 5-6, Park et al and Terrill et al together disclose all steps of the method set forth in the claimed invention.

Allowable Subject Matter

Claims 2-4, 7, 10-11 are allowed.

Response to Arguments

Applicant's arguments with respect to claims 5-6, 13-18 have been considered but are moot in view of the new ground(s) of rejection.

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 2815

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
